Clinic on Dynamical Approaches to Infectious Disease Data

12-18 December 2021

Virtual edition

Request for Applications

The International Clinics on Infectious Disease Dynamics and Data (ICI3D) Program invites applications to the tenth annual Clinic on Dynamical Approaches to Infectious Disease Data (DAIDD). This 1-week intensive modeling clinic will provide an introduction to dynamical models used in the study of infectious disease dynamics. The Clinic will bring together postgraduate students and researchers from around the world, and instruction will focus on how the complex dynamics of pathogen transmission influence study design and data collection for addressing problems in infectious disease research.

The Clinic will consist of a series of interactive lectures and tutorials that will guide participants through the uses of dynamical modeling in epidemiology. Various modeling paradigms will be discussed, with a particular focus on the development of compartmental models, and participants will be given guidance regarding the appropriate use of models to address their own research questions. Working closely with their peers and with Clinic faculty, each participant will develop a research plan that describes a roadmap for integration of dynamic modeling with data collection and/or analysis in a study system of their choosing. The research plan can be used as a framework for grant or dissertation proposals when participants return to their home institutions.

Students and researchers with a demonstrated interest in infectious disease research are encouraged to apply. Applicants with a good grounding in statistics and experience with data collection will be preferred. This workshop is not intended for those with substantial prior experience in dynamical modeling.

The course registration fee is ZAR 3,000 or US$215. A small number of scholarships are available. All participants must have access to high-speed internet for the duration of the Clinic.

The application process for the Clinic is competitive. **The deadline for receipt of applications is 4 November 2021 at 23:59 SAST.** Incomplete applications will not be considered.

A description of the application procedure, eligibility requirements, session times for different time zones, and all necessary forms are located online and can be accessed through the Clinic's website:
